OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
coho (electroshocker)	21-Jul-98		parr	several	<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** Two foot wide stream or less. On May 28, 1998 and June 21, 1998, we sampled Grizzly Bar streams #2 to #4 only up to the dense willow/alder vegetation, with minnow traps and electroshocker, respectively. Coho parr were found in stream #3 with the electroshocker.
